Thank you for this opportunity to give honest feedback on how this process has impacted me and my students.

Handing of the roadway sign configuration needs improvement. Either all of the signs need to be changed at once, not in increments, for traffic safety. ADA redirection pathways were often not wide enough.

Listen to the users regarding furniture.

Get new engineers.

Do not move into a new building before it is commissioned!

The whole Measure C Bond Modernization is disaster, a mess, chaos...

The major problem is that there seems to be no “standard” on anything. I have been directly involved in the setup of all building (either new or remodeled) and everyone is different, and no one (board and upper level management) seem to care. I remember spending hours in meetings coming up with the standards to be used only to see them disregarded for the sake of saving a few $$$. Swinerton is not doing their part in making sure the problems we have experienced on prior buildings do not get repeated as me move forward. The simple fact is once Swinerton is gone the College will be stuck maintaining whatever was installed.

The more communication, the better. My job involves delivering media equipment to the new buildings. Now that the media equipment is installed, I hope things will be alot smoother for all of us.

Don’t move people into buildings that are not ready for them. Don’t ignore faculty suggestions that will save the school money and be the appropriate equipment and environment for instruction.

Get rid of Logan/Wong architects, they have designed the worst Art building I have ever been in or have had to use. Everything is wrong from the heating and ventilation. Electrical systems, Lighting,Plumbing the fitting of doors. Very Bad design solutions
Get rid of Swinerton. They are scoundrels who have installed the cheapest crap available. It looks like they cut corners at every opportunity. Everything is poorly installed and often non functional. It has been a miserable semester.
