The 2012 Facilities Plan provides an account of the latest planning and construction at the College of Marin. Section Two, An Introduction to the College of Marin Planning: Processes and People, begins with the College’s Planning Team, Mission, Vision and Values. An overview of each campus is provided followed by an outline of the people (faculty, staff, administrators and students) and governance structures and processes involved with facilities planning.

Section Three, A History of Facilities Plans (1924 through Measure C), provides background to the historical planning and construction undertaken at College of Marin since its inception in 1924. Most recently, the District is amidst the final planning, design and construction phases afforded by the 2004 Measure C Capital Facilities Program, funded largely by a locally supported facilities bond. Completed construction and projects still in progress are highlighted with greater detail.

Facilities planning has been developed in support of the District’s Educational Master Plan (EMP). Section Four, the 2012 Facilities Plan, links planning to the EMP, to State standards, and to WASC standards. Supportive space requirements and justifications as well as future capital planning are detailed here.

Section Five, Sustainability of College of Marin’s Facilities, details the Maintenance & Operations processes and procedures, and provides a description of a new software database system. As the District seeks the greatest attainable efficiencies in planning and operations, new software and processes are being implemented. Through direct linkage with the State Chancellor’s Office FUSION database, the campus facilities can be assured of alignment with current facilities information and annual submittal requirements. Additionally, building and site information will be recorded and accessible for timely maintenance requirements. As a first step, the District is implementing a greater level of detail on two pilot projects. The system is scalable and future buildings will likely be added to this database.

Appendices of additional data and graphics can be found in Section Six. As the District continues its development of facilities in support of its Educational Master Plan, this document will be a guide for continued institutional effectiveness and collaboration in planning facilities, maintenance, and day-to-day operations.
